

CROss-National Online Survey (CRONOS) Panel data now available

The [CROss-National Online Survey Panel \(CRONOS\)](#) is the world's first input-harmonised cross-national probability-based web panel to be undertaken. It has been piloted in three countries – Estonia, Great Britain and Slovenia – by following up with respondents who took part in Round 8 (2016) of the European Social Survey (ESS).

As part of the [SERISS](#) project, the CRONOS panel has served as a platform for experimental testing also for EVS.

The first wave of CRONOS features items from the European Values Study.
